Maksym Babenko

Senior AI & Automation Engineer | Python

8+ years in software engineering | Prague, Czechia | Originally from Kyiv, Ukraine

cv.maxbob.xyz / github.com/mazamaka / LinkedIn: max-bob-python

mazamaka603@gmail.com / Telegram: @Mazamaka / +380 99 045 1609

I build AI agents, browser automation and production Python services. My focus is connecting models to tools and operational workflows, with deep experience in browser fingerprinting, antifraud diagnostics and API integrations. I have led automation teams and work across architecture, implementation, deployment and ongoing operations.

CORE EXPERTISE

AI & agents: MCP, Claude and OpenAI APIs, tool calling, streaming, browser-use, multi-agent workflows and realtime voice.
Browser & antifraud: Playwright, Selenium, nodriver, CDP, Octo Browser, Android/ADB; Canvas, WebGL, Audio and TLS fingerprints; IP reputation diagnostics.
Python & data: FastAPI, Flask, asyncio, aiohttp, SQLAlchemy, Alembic, PostgreSQL, MySQL, Redis and MinIO.
Orchestration & delivery: Celery, RabbitMQ, Temporal, Docker, Linux, GitLab CI/CD, Nginx, Cloudflare, Prometheus/Grafana; React/TypeScript and browser extensions.

PROFESSIONAL EXPERIENCE

Traffic Devils | Python Developer — Nov 2022 - Present

- Develop Python services and administration platforms for task orchestration, browser profiles, audit trails, provider integrations and live operational updates.
- Build AI-powered browser workers and Telegram workflows; integrate Gmail/OAuth, Google Ads, Google Sheets, payment services and LLM providers.
- Maintain Docker deployments, CI/CD, centralized logging, MinIO artifacts, monitoring and health checks for automation workers.

Freelance | RPA Python Developer — Jun 2022 - Nov 2022

- Built browser and social-platform automation with Selenium, FastAPI, REST APIs, administration interfaces and proxy/session management.

AcidBro | RPA Python Developer / Team Lead — Jan 2021 - Jun 2022

- Led automation delivery across browser and Android workflows using Python, Zennoposter and BAS; contributed to antidetect browser development and maintained server infrastructure.

Financial Broker | RPA Developer / Team Lead — Jun 2020 - Jan 2021

- Led the automation function, developed browser workflows and operated mobile-proxy infrastructure.

Quora Project | RPA Developer — Sep 2019 - May 2020

- Built browser automation and Telegram services; configured mobile-proxy systems for automated workflows.

OnlineReputation | Developer / SysAdmin — Oct 2017 - Aug 2019

- Developed Zennoposter automation and HTTP workflows; administered office networks and IT infrastructure.

Selected engineering work

Public code, technical case studies and selected private systems

octo-mcp | AI agent tooling

MCP server connecting agents to Octo Browser Local and Cloud APIs. Async profile management, Playwright actions over CDP, remote browser hosts and bounded retries for API rate limits.

GitHub / Technical case study

Alpha Scout | Research and decision pipelines

Scheduled collection from Reddit, GitHub, Hacker News, RSS and other sources. Content deduplication, two-stage LLM screening and analysis, configurable scoring, Telegram alerts and a FastAPI dashboard.

GitHub / Technical case study

Claudegate + Server Ops | AI infrastructure

OpenAI-compatible Claude Code gateway with streaming, tool calls, image input and persistent sessions. Supporting Linux deployment tooling adds systemd services, completion-based health probes and end-to-end smoke checks.

Gateway source / Operations source

Browser fingerprinting & diagnostics | Antifraud engineering

CDP-level fingerprint customization in isolated Docker environments. FastAPI and Chrome/Firefox extensions connect IP-quality checks with device diagnostics; browser instrumentation exposes fingerprinting API calls.

nodriver-antidetect / ipqs-checker / antifraud-spy

LLM Latency Tracker | Observability and open data

Distributed regional probes for API availability and latency, with p50/p95 statistics, historical snapshots, JSON API and MCP access. Network response time and optional inference time-to-first-token are measured separately.

GitHub / Live dashboard

BlueStacks Antidetect | Device automation

FastAPI and Android Debug Bridge manage emulator instances, device profiles and proxy routing. Extends automation beyond browser tabs into Android environments.

GitHub

AI Website Platform | Private implementation

Platform for generating and managing networks of websites. MCP tools and background jobs connect AI content generation, previews, publishing and monitoring through an administration interface.

Public overview

MaxBob AI | Native voice applications

SwiftUI assistant across iOS, macOS and watchOS, backed by Python services. WebRTC carries realtime audio; Apple integrations include reminders, shortcuts and cross-device workflows. Source code is private.

Live product / Portfolio overview

EDUCATION & LANGUAGES

Kyiv National University of Technologies and Design (KNUTD)
Mechatronics & Computer Technologies - Electrical Engineering, 2013 - 2019. Graduated with honors.
Languages: Ukrainian - fluent; Russian - fluent; English - intermediate.

More work: Portfolio & case studies / GitHub
